

## SAC

SAC has served the land based community for over 100 years through its education, consultancy and research services. SAC research is directed at improving animal health and welfare through better management systems, nutrition and disease control. We work at international level, coordinating projects such as EPIC. From 8 strategically placed Scottish Disease Surveillance Centres, SAC Consulting: Veterinary Services provides a comprehensive diagnostic service for practice vets. Farm animal disease surveillance activity, supported by Scottish Government, informs the GB surveillance programme and market leading UK cattle and sheep health schemes. Companion animal testing is provided by Capital Diagnostics.
