The Royal College of Veterinary Surgeons

Report of the RCVS Legislation Working Party

Presented to RCVS Council on 4 June 2020
Executive summary

1. This report presents the findings of the RCVS Legislation Working Party (LWP). The LWP was established in 2017 with a mission to examine the Veterinary Surgeons Act 1966 (VSA), and to make proposals for reform to ensure that the RCVS can be a modern and efficient regulator.

2. The LWP was tasked to establish principles on which any reform would be based, and to ensure that any recommendations were considered in the round to produce a coherent vision. The LWP was specifically tasked with ensuring that consideration was given to a more comprehensive piece of legislation that could incorporate allied paraprofessionals and the regulation of veterinary practices.

3. The LWP consisted of a membership drawn from across RCVS Council, Officer team and staff, including veterinary surgeons, veterinary nurses and lay members, as well as representation from both the British Veterinary Association (BVA) and British Veterinary Nursing Association (BVNA). Over the course of three years and twelve meetings the LWP explored over 56 reform proposals, from fundamental questions to relatively minor changes.

4. Should council choose to accept them, all the recommendations in the report will be subject to consultation with the professions and the public. Some recommendations do not call for immediate change, but ask that the RCVS be given powers to be able to implement a particular measure in future should detailed proposals be developed and RCVS Council decide to implement them – with (where appropriate), the Secretary of State agreeing via an Order in Council\(^1\) or other method. This future-proofing would remove the burden of additional Parliamentary time or other burdensome processes being required in future.

Key messages:

The principles of legislative reform

5. The LWP established the following principles on which reform should be based:

**Principle 1:** Legislation should not be unduly burdensome or complicated; it should provide clarity to the public and enhance public confidence in the professions, e.g. protection of veterinary titles, statutory underpinning for continuing professional development (CPD).

---

\(^1\) A secondary piece of legislation approved by the Queen on the advice of the Privy Council
**Principle 2:** The RCVS disciplinary process should be ‘forward looking’, with public protection at its heart.

**Principle 3:** That the vet-led team should fall under a single regulatory umbrella.

**Principle 4:** By default, acts of veterinary surgery should continue to be restricted to veterinary surgeons. However, in order to allow for futureproofing, there should be flexibility to reflect and review the procedures that may be delegated to appropriately qualified and supervised members of the vet-led team. Additional tasks may be delegated where this can be fully justified and evidenced. Such evidence may include comparison with other health professions.

**Principle 5:** Delegation rights to different paraprofessions should be variable without impacting each other. For instance, the rights of VNs to undertake minor acts of veterinary surgery should be amendable without impacting the rights of farmers as is the situation at present.

**Key recommendations:**

6. **Embracing the vet-led team.** The LWP defined the vet-led team as ‘appropriately-regulated professionals, including veterinary nurses, working under the direction of a veterinary surgeon, to protect animal health and welfare”. The RCVS is proud of its regulation of veterinary nurses, who play an essential part in the vet-led team, and the LWP is keen to allow veterinary nurses to expand their role. The LWP’s recommendations also build on previous work by the RCVS to call for additional paraprofessions to be brought under the RCVS’s umbrella – becoming ‘allied professions’ - to underpin their standards. The LWP proposes the adoption of a model of paraprofessional regulation similar to that of the General Dental Council, allowing the RCVS to regulate all members of the vet-led team, and to create greater evidence-led flexibility over what can be delegated to these allied professionals. The LWP recommends that statutory protection be given to the professional titles of all allied professions regulated by the RCVS, including veterinary nurses.

7. **Assuring practice standards.** The RCVS Practice Standard Scheme (PSS) has been very successful in promoting high standards within veterinary practice. However, it is a voluntary scheme and as a result there is no mechanism to ensure standards across all practices through assessments. At present the RCVS only regulates individual veterinary surgeons and nurses, unlike modern regulatory regimes such as that recently established for the General Pharmaceutical Council. Nor does the veterinary sector have an equivalent to the Care Quality Commission. The LWP recommends that the RCVS be granted statutory authority to regulate all practices. In order for practice regulation to be meaningful and enforceable across the board the RCVS would need powers of entry similar to those regulators.

8. **Introducing a ‘Fitness to Practise’ regime.** The RCVS’s existing disciplinary processes do not reflect modern best practice. The LWP recommends introducing a forward-looking ‘Fitness to Practise’ regime with less focus on past misconduct, instead introducing the concept of ‘current
impairment’. This model would include the following: introducing a wider range of sanctions, including conditions of practice orders which would restrict practice short of suspension; introducing interim orders to allow vets and RVNs to be restricted from practising whilst cases are investigated where there is a significant risk of harm; introducing; and underpinning the Health and Performance Protocols in legislation. The LWP also recommends reforming the appeal processes so that they become the responsibility of the High Court rather than the Privy Council and introducing the power to require disclosure of information. The LWP further recommends reducing the Disciplinary Quorum to three, with flexibility to use a larger number of Committee members for longer or more complex cases.

9. Modernising RCVS registration. The LWP recommendations include a number of reforms to improve the RCVS’s registration processes that are not possible under the VSA. This includes the separation of registration and licence to practise, in line with other regulators, to underpin mandatory CPD and to enable the RCVS to introduce a revalidation regime (as found in other health professions such as the General Medical Council) if this was judged to be appropriate in future.

10. Improving access to the profession for those with disabilities. The LWP recommends the introduction of provisions for limited licensure in specific circumstances where disability would limit the ability to work in all areas of practice.

11. Retaining a Royal College that regulates. The LWP recommends that the RCVS continues to be a ‘Royal College that Regulates’. This unique arrangement allows the RCVS to take a holistic approach to public assurance. It also ensures that the Royal College functions are properly funded; some RCVS activities might well not be carried out at all if the RCVS did not take responsibility for them. These includes some Charter-based activities carried out as part of the proactive and supportive approach to regulation such as initiatives in the area of mental health and leadership.

12. Towards a new Act? Many of the proposed recommendations require primary legislation. The number and scale of proposed changes, and in particular the proposal to embrace paraprofessionals by regulating the whole veterinary team, mean that it is unlikely that the LWP’s coherent vision for reform can be achieved in its entirety, or even substantially, via amendments to the Veterinary Surgeons Act 1966. While some recommendations could perhaps be implemented piecemeal via secondary legislation, any combination of these may well be too substantial a reform for this method of legislative change. The RCVS has done the best it can within the limits of the VSA since its creation in 1966, but the process of using creative solutions to mitigate the limitations of the Act, such as the health and performance protocols, may now be nearing its limit. The VSA is in many ways an old-fashioned piece of legislation, overly restrictive and prescriptive, burdensome rather than principles-based, and unfit to underpin the work of a modern regulator or a modern profession.
Introduction

13. The Veterinary Surgeons Act has been under review since it became law in 1966, and while it has served both public and the veterinary profession well in many ways, various reviews over the years have highlighted its inadequacies. It has been amended numerous times, and sometimes substantially – notably in 1991 when veterinary nurses were named and empowered by the reform of Schedule 3 of the Act.

14. In 2008, the Environment, Food and Rural Affairs Committee (EfraCom) published a report on the Veterinary Surgeons Act and its possible replacement. Much progress has been made since then on various issues raised in the report, including reform to modernise RCVS governance and to make its disciplinary processes independent of RCVS Council. There is now much more consensus across the profession on the ‘veterinary-led team model’, potentially enabling Defra’s ambition that “any successor to the VSA would need to encompass providers of wider veterinary services.” The EfraCom report, and Defra’s response to it, included agreement that the RCVS’s disciplinary measures should include a wider range of sanctions. The EfraCom report also stressed that further consensus should be sought across the profession for further reforms, and the LWP is keen that this new report and the consultation that follows be part of this process.

15. In more recent years, the 2013 First Rate Regulator report highlighted several trends in regulatory reform reflecting shifts in public expectations in professionals and the organisations charged with regulating them, noting that “Regulatory reform has been underpinned by a need to sustain or boost public confidence in the way professions are regulated”. This can be seen in the shift towards risk-based approaches to regulation by a number of regulators, with “a stronger focus on consumer expectations and outcomes”. The importance of the agility and flexibility of regulation was also highlighted.

16. The report indicated numerous areas in which the RCVS was out-of-step with best practice, and that would require legislative reform to remedy. Some of these areas, including the separation of disciplinary committees from Council, and the reform of Council’s composition, were achieved via Legislative Reform Orders in 2013 and 2018 respectively.

17. In addition to the VSA, the RCVS is also underpinned by Royal Charter. A new Charter was granted as recently as 2015. This Charter established the objectives of the RCVS as a Royal College that regulates, and which therefore go beyond that of a narrow regulator: "to set, uphold and advance veterinary standards, and to promote, encourage and advance the study and practice of the art and science of veterinary surgery and medicine, in the interests of the health and welfare of animals and in the wider public interest". The new Charter also underpins the

4 First Rate Regulator report 2013, P10
regulation of veterinary nurses, and contains provision for new allied professions to be regulated by the RCVS. However, it made no provisions for delegation to these allied professions, as this requires primary legislation.

18. In 2016, the RCVS submitted a petition to Defra containing over 10,000 signatures calling for statutory protection of the title ‘veterinary nurse’. While Defra was not prepared to legislate for this at that time, they suggested a review of Schedule 3 of the VSA to explore whether the VN role should be expanded. This led to the RCVS establishing a working party which undertook a survey of both the veterinary surgeon and veterinary nurse professions, which confirmed an appetite for VNs to be able to undertake more tasks than at present, ensuring increased utilisation of existing skills.

19. Between 2016 and 2018 the RCVS also undertook a review of the VSA’s ‘Exemption Orders’ which allow certain minor acts of veterinary surgery to be undertaken by non-veterinarians. The subsequent report\(^5\) was published in January 2019, and recommended historic reforms to add the work of several paraprofessions to Schedule 3, while bringing those paraprofessions under the regulatory umbrella of the RCVS. It is as yet unclear whether it would be possible to achieve these recommendations via reform of the existing VSA, or whether new primary legislation would be needed.

20. Following the UK’s 2016 referendum on European Union membership it was decided to broaden these reviews into a full analysis of the Veterinary Surgeons Act in order to help ensure that veterinary regulation could continue to be fit for purpose in a changing world. The Legislation Working Party drew on reform suggestions from staff and Officers of the RCVS, as well as suggestions made by the British Veterinary Association and British Veterinary Nursing Association, who were represented on the Working Party. The LWP’s main recommendations are presented below, grouped by theme. A full list of recommendations is presented in Annex A.

21. At all times, the LWP has sought to examine what other regulators do, both at home and abroad. This is not because others always have it right and the RCVS does not. Each recommendation has been made on its own merits. However, there is a reason why ‘best practice’ is regarded as such. While there may be a case for the regulation of the veterinary profession to differ from other professions, even in the healthcare sector, the LWP has taken the view that such exceptions need to be carefully justified. On the whole, the LWP has recommended a set of reforms that brings the RCVS more into line with current regulatory standards, and ensure that this is done in a way that allows regulation to be more responsive to future changes.

Part 1: Embracing the vet-led team

22. The RCVS is the regulator of both veterinary surgeons and veterinary nurses. Under Schedule 3 of the existing VSA, veterinary nurses are able to undertake medical treatment and minor surgery, not involving entry into a body cavity.

Recommendation 1.1: Statutory regulation of the vet-led team

23. The LWP reaffirms the recommendations found in the 2019 RCVS report to Defra on the Review of Minor Procedures Regime (RMPR report). Among the recommendations was a two-fold approach to veterinary paraprofessionals:

24. First, legislation should be amended to underpin the work of those paraprofessions who are currently working in a legal ‘grey area’ as their work amounts to acts of veterinary surgery too substantial to be underpinned by an exemption order: in particular equine dental technicians, musculoskeletal therapists, and cattle foot trimmers.

25. Second, the RCVS should seek to bring the vet-led team under its regulatory umbrella in order to be able to assure standards and protect animal health and welfare – this is particularly necessary for those paraprofessionals who carry out acts of veterinary surgery.

26. The RMPR report attempted to address the issue of paraprofessionals by making proposals that could potentially be achieved by reform of the existing VSA. However, the legal advice on whether this could be achieved in practice is inconclusive – it is possible that it would ‘stretch’ the VSA too far from its original purpose to be acceptable to legislators. Further, it would be a somewhat inflexible measure that does not provide for futureproofing. Any new paraprofession requiring legislative underpinning (such as the proposed formal vet tech role) would require significant further legislation to achieve. This contrasts with regulatory regimes such as the General Dental Council (GDC), who are able to add new paraprofessions to their regulatory remit via Section 60 Orders under the Health and Social Care Act.

27. The LWP therefore recommends that new legislation should provide flexibility to allow the RCVS to give legal and regulatory underpinning to new paraprofessions whose work amounts to veterinary surgery without recourse to new legislation. This should be full statutory regulation, and may include measures to allow ‘grandfathering’ to ensure that no-one is denied the right to a livelihood, much as existing practitioners were grandfathered by the early Veterinary Surgeons Acts.
Recommendation 1.2: Flexible delegation powers

28. The LWP reiterates that, by default, acts of veterinary surgery should be reserved to veterinary surgeons. At present, new legislation is required if Council determines that additional acts of veterinary surgery can be undertaken by a properly regulated and supervised paraprofession. The LWP concludes that this is too restrictive, and, in accordance with Principle 4 and modern regulatory regimes such as those for social workers under the Social Workers Regulations 2018, recommends that the RCVS should be able to determine which tasks should be eligible for delegation by a veterinary surgeon where such delegation can be fully justified and evidenced, subject to rules concerning consultation requirements and approval by the Secretary of State.

Recommendation 1.3: Separating employment and delegation

29. The LWP notes that some paraprofessionals could be part of the vet-led team without necessarily being employed by a veterinary surgeon. While the legal underpinning for their activities is not yet in place, this is already the case with some paraprofessions such as equine dental technicians whose work can consist of veterinary surgery requiring delegation by a veterinary surgeon.

30. At present, Schedule 3 of the VSA restricts such delegation to allied professionals (currently only veterinary nurses) who are in the employ of the delegating veterinary surgeon. The LWP recommends that this restriction is removed. In practice, this would allow a ‘district veterinary nurse’ model, in which VNs could help clients to administer treatment to their pets at home under the direction of a veterinary surgeon who was not their employer. The veterinary nurse would be working ‘with but not for’ a veterinary practice. Decoupling direction from employment would avoid a potential double-standard relative to other paraprofessions, and help to better use VNs to their full potential in the interests of animal health and welfare.

Recommendation 1.4: Statutory protection for professional titles

31. The RCVS already has a longstanding recommendation that the title ‘veterinary nurse’ should be protected to prevent its use by unqualified, unregulated individuals. The protection of professional titles gives clarity and assurance to the public. The LWP reaffirms this recommendation, and recommends that protection of title be extended to any new paraprofessions who fall under the RCVS’s regulatory umbrella.
Part 2: Enhancing the VN role

In addition to separating employment from delegation rights, and giving statutory protection to the title ‘veterinary nurse’, the LWP also recommends a number of specific expansions of the VN role:

Recommendation 2.1: Extending the VN role in anaesthesia

32. In 2015, following extensive consultation and discussion, RCVS Council approved a recommendation to increase the role of veterinary nurses in the induction and maintenance of anaesthesia via reform of Schedule 3. These proposals would allow the veterinary nurse to “assist in all aspects of anaesthesia under supervision”, pursuant to an animal-specific protocol, increasing utilisation of veterinary nurses while freeing up veterinary surgeons’ time. The LWP supports the retention of this recommendation.

Recommendation 2.2: Allowing VNs to undertake cat castrations

33. At present, Schedule 3 explicitly prohibits veterinary nurses from carrying out cat castrations. Having reviewed the history of the VSA, it is clear that this provision was introduced in 1988, as the last in a series of Statutory Instruments that prohibited untrained lay people, including farmers, from carrying out numerous acts that should be reserved to veterinarians for animal welfare reasons. Prior to this, cat castrations had been carried out legally by laypeople (including the precursor to veterinary nurses, Animal Nursing Auxiliaries) under both the 1948 and 1966 Acts.

34. When the 1988 Statutory Instrument (SI) was introduced the term ‘veterinary nurse’ had only been in use for four years, and the reforms to Schedule 3 to formally recognise their role and allow them to undertake minor acts of veterinary surgery was still three years away. The non-statutory register of VNs would not be introduced for another 19 years. Since then, things have moved on considerably. Veterinary nurses are now a fully-fledged allied profession, Associates of and regulated by the RCVS under its Royal Charter powers. They are not the ‘laypeople’ whom the SI targeted in 1988. Notwithstanding the debatable question of whether castration is ‘entry into a body cavity’, the LWP recommends that veterinary nurses should be able to undertake this task under veterinary direction and supervision.

Future recommendations

35. The RCVS is also exploring additional options for enhancing the VN role that do not require changes to the Veterinary Surgeons Act. Research is currently being carried out into the risks and opportunities of a potential ‘VN prescriber’ role that could allow VNs to prescribe certain routine medicines that are currently restricted to veterinary surgeons. Recommendations may be brought
to Council for decision in due course, based on the results of this research. Implementation of any recommendation would involve legislation to amend the Veterinary Medicines Regulations.

Part 3: Assuring practice regulation

Recommendation 3.1: Mandatory practice regulation

36. Unlike other sectors, there is no body responsible for regulating veterinary practices. In human healthcare the Care Quality Commission fulfils this role, and some overseas veterinary regulators such as the Veterinary Council of Ireland have this responsibility. At present, the RCVS has no mandatory powers to regulate veterinary practices. This is increasingly at odds with a world in which practices may not be owned by the individual veterinary surgeons whom the RCVS does regulate. It is reasonable for the public to expect that all practices are assessed to ensure that they meet at least the basic minimum legal requirements, and at present this assurance is not in place for all practices.

37. The RCVS Practice Standards Scheme (PSS) has been very successful in assuring standards, and a recent ‘reboot’ of the scheme has increased membership to 68% of veterinary practices. Whilst non-PSS practices might be meeting core standards, there is no guarantee or assurance that this is the case – this is not consistent with our aims re animal welfare and public protection. The RCVS has sought to address this via the Code of Professional Conduct. However, as the Code only applies to individual veterinary surgeons this does not necessarily sit easy with responsibilities at practice level where individuals will have varying degrees of control over practice decisions and policies, and therefore creates a greater responsibility for more junior members of staff than might be considered reasonable.

38. The LWP therefore recommends that the RCVS be given the power to implement mandatory practice regulation, including powers of entry, should RCVS Council decide to complement the PSS with a universally-applied scheme.

Recommendation 3.2: Powers of entry for the RCVS

39. The RCVS has no power of entry, meaning it does not have the right to enter a veterinary practice without consent. In most cases, this does not pose a problem in terms of investigating allegations of serious professional misconduct. However, where there are allegations that a veterinary surgeon has breached paragraph 4.3 of the RCVS Code of Professional Conduct, which states that ‘veterinary surgeons must maintain minimum practice standards equivalent to the Core Standards of the RCVS Practice Standards Scheme [PSS]’, powers of entry would be useful. This is because, if a veterinary surgeon refuses entry, it is extremely difficult, if not impossible, for the RCVS to investigate allegations of this nature.
40. While it is rare for other regulators to have powers of entry, human healthcare premises, for example, hospitals, GP surgeries and care homes, are regulated by the Care Quality Commission (CQC) which has powers of entry and may carry out unannounced inspections. The LWP recommends that the RCVS be given powers of entry in order to remedy this omission in the veterinary sector, and to ensure that regulation of practices can be underpinned and enforced.

**Recommendation 3.3: Power to issue improvement notices**

41. The LWP recommends that the RCVS be granted the power to issue improvement notices when a person or a business is failing to fulfil a legal duty, and where improvement is required to ensure future compliance. This would provide better protection for the public, while being a more proportionate response than pursuing a disciplinary case. Improvement notices provide practices with a clear and concrete action plan to remedy any deficiencies.
Part 4: Introduce a modern ‘Fitness to Practise’ regime

42. Under the VSA, the RCVS may only take action where there has been ‘serious professional misconduct’ (SPMC). The definition of SPMC is widely accepted as conduct which falls far below the standard expected of a veterinary surgeon. As such, the RCVS can only deal with the most serious of allegations, and negligence (i.e. conduct falling below the standard expected) falls outside the scope of the RCVS’ powers.

43. Almost all human healthcare regulators operate a variant of the ‘Fitness to Practise’ (‘FTP’) model. The key characteristic of the FTP model is that it focuses on whether or not a registrant’s fitness to practise is ‘currently impaired’, rather than whether they have been guilty of SPMC in the past. Prior to FTP, the prevailing model for regulation was the ‘unacceptable professional conduct’ (‘UPC’) model (a concept very similar to disgraceful conduct/SPMC); however, this model is now considered to be outdated as it is backward-looking, i.e. focusing on past misconduct. By way of contrast, the emphasis of FTP is forward-looking, i.e. focusing on whether there is any risk to the public or the public interest. Moving the focus away from disgraceful conduct would also allow the RCVS to consider matters where a practitioner’s fitness to practise is impaired for other reasons (such as those currently addressed by the existing RCVS Health and Performance Protocols) which in turn would better protect animals and the public.

44. In a recent paper, the Professional Standards Authority (PSA) called for a number of reforms of the FTP model, and the LWP’s recommendations take these latest proposals into account.

45. The LWP recommends that any new legislation should include measures with a view to achieving the following:

   a. A ‘forward-looking’ process with the protection of animals and the public at its heart
   b. An enhanced suite of powers available to enable more effective investigations and case management
   c. A reduction in the length and cost of investigations/proceedings wherever possible
   d. The ability to amend/update legislation more easily in the future as systems and thinking develops.

46. In addition to these broad objectives, there are also a number of specific matters that require attention. All of these matters, broad and specific, are explored in more detail below.

47. **A ‘forward-looking’ process with the protection of animals and the public at its heart:**

   Legislative changes in a number of areas would assist the RCVS in achieving this objective:

---

6 First Rate Regulator report 2013, P34  
a. **Recommendation 4.1: Introducing the concept of ‘current impairment’**

Under the current system, if a veterinary surgeon or veterinary nurse is found guilty of misconduct the Disciplinary Committee (DC) proceeds straight to the sanction stage, and the sanction is determined on the basis of that past misconduct. The LWP recommends that this is changed in line with the fitness to practise model. Under this system, DC would need to be satisfied that the veterinary surgeon’s or nurse’s fitness to practice is currently impaired before it could proceed to the sanction stage. This means that in circumstances where the veterinary surgeon or nurse has taken steps to remediate their failings and shown significant insight into what has gone wrong, the DC may conclude that there is no (or very low) risk of repetition of similar behaviour and as such, the veterinary surgeon’s fitness to practise is not currently impaired. If the DC comes to this conclusion, it must dismiss the case without proceeding to sanction, even though the veterinary surgeon or nurse has been guilty of misconduct in the past.

This approach is more consistent with the aims of regulation, because it focuses on whether the veterinary surgeon or nurse currently poses a risk to animals and the public, rather than whether he or she has posed a risk in the past.

b. **Recommendation 4.2: Widening the grounds for investigation**

At present, the RCVS may only investigate where there is an allegation that could amount to SPMC. This means that the RCVS may not intervene in cases where a practitioner might pose a risk to animals, the public or the public interest for other reasons. For cases involving allegations of poor performance or ill-health affecting a veterinary surgeon or nurse’s ability to practise safely, the RCVS has devised the Health and Performance Protocols, which provide a framework for the RCVS to work with an individual towards the common aim of becoming fit to practise, however these can only be engaged with the consent of the individual concerned. Where there is no consent, the PIC have no option but to refer the matter to the DC. A more satisfactory situation might be the option to refer such cases to a dedicated ‘health’ or ‘performance’ committee that has a range of appropriate and proportionate powers designed to support the veterinary surgeon or nurse in regaining their fitness to practise.

c. **Recommendation 4.3: Introducing powers to impose interim orders**

The LWP recommends that the RCVS should have the power to impose interim orders, i.e. a temporary restriction on a veterinary surgeon or nurse’s right to practise pending a final decision by DC where a veterinary surgeon or nurse poses a significant risk to the public or to animals. The current lack of power to impose interim orders is not only problematic during the investigation stage, it is also an issue in cases that have been through the full hearing process and DC have decided to suspend or removal a practitioner’s registration. In such cases, there is a statutory appeal period of 28 days
and, as such, the sanction does not take effect until that time has elapsed (and if an appeal is lodged, not until that the appeal is dismissed or withdrawn). The result of this is an illogical situation where DC have determined that a practitioner is not fit to practise and yet they are permitted to practise for 28 days or significantly longer (sometimes up to a year) depending on whether or not an appeal has been lodged.

d. **Recommendation 4.4: Introduce reviews of suspension orders**
   At present, DC has no power to review the suspension orders it imposes; in other words, if a practitioner is suspended for six months they are automatically restored to the Register once that time has elapsed, whether or not they are fit to be restored. The practical effect of this is that where DC has concerns regarding a respondent’s fitness to practise, it has no choice but to remove them from the Register completely as it is the only way to retain any control over that person’s restoration to the Register. The LWP recommends that DC be empowered to review suspensions and, if necessary, extend the suspension or impose conditional registration as part of that review; they would then be able to ensure protection of animals and the public and, at the same time, impose a less onerous sanction on the veterinary surgeon or nurse.

e. **Recommendation 4.5: Introduce a wider range of sanctions**
The range of sanctions available to DC is very limited, in that it may only issue a reprimand or warning or suspend or remove an individual from the Register. The LWP recommends that DC be given the power to impose conditional or restricted registration (also known as ‘conditions of practice orders’), a power almost all other regulators have. Again, the power to impose conditions of practice orders would allow DC, in suitable cases, to adequately protect animals and the public by imposing a less onerous sanction.

48. **An enhanced suite of powers available to enable more effective investigations and case management:** There are a number of additional powers that would enable the RCVS to better achieve this objective. These are outlined below:

   a. **Recommendation 4.6: Introduce the power to require disclosure of information**
      Other regulators, including the healthcare regulators, have statutory power to require disclosure of information where that information may be relevant to a fitness to practise investigation. By way of contrast, the RCVS has no such power and instead must rely on the cooperation of the relevant parties, which is not always forthcoming. In recent times, the RCVS has had particular difficulty in obtaining information from a number of organisations, which has resulted in difficulties with investigations. This situation is

---

8 DC may also take no further action or postpone judgment (with or without undertakings) for up to two years, however these are powers are not true ‘sanctions’
unsatisfactory as it hinders the RCVS from effectively carrying out its investigative duties; the LWP recommends that this is remedied.

49. A reduction in the length and cost of investigations/proceedings wherever possible: There are a number of areas where legislative change could reduce the length and cost of investigations and disciplinary hearings:

   a. Recommendation 4.7: Formalise role of Case Examiners and allow them to conclude cases consensually

      At present the RCVS does have a ‘case examination’ stage, but it does not operate a true Case Examiner (CE) model. In the case of other regulators that use the CE model (e.g. the General Medical Council (GMC), GDC, Nursing and Midwifery Council (NMC) and General Optical Council (GOC)), CEs make decisions in pairs (one registrant and one lay) and, in some cases, one or both are employees of the regulator. CEs also have powers that allow them to dispose of suitable cases consensually where the threshold for referral is met (so long as the wider public interest can be satisfied by disposing of the case in this way). This model is more cost effective than convening the Preliminary Investigation Committee (PIC) for all decisions (NMC has recently reported a year-on-year decrease in FTP spending and has attributed this, in part, to the introduction of CEs). It allows for quicker and more consistent decision-making, and is less stressful for the respondent if the case is subject to consensual case conclusion. The CE model may be particularly useful in health and performance cases where undertakings or conditions are used (similar to the result achieved by the RCVS Health and Performance Protocols).

50. The LWP have also made recommendations in relation to restoration periods, the appeal process and case management conferences: see Annex A for details.

Standard of proof

51. The RCVS is in a small minority of regulators – and the only major regulator - that still applies the criminal standard of proof, i.e. beyond reasonable doubt/so as to be sure, when deciding the facts of a case as other regulators have now moved to the civil standard, i.e. the balance of probabilities/more likely than not. In light of the primary purpose of regulation, the civil standard is considered to be the more appropriate standard of proof as, as the Law Commission explained in its 2014 report on the regulation of health and social care professionals in England, ‘it is not acceptable that a registrant who is more likely than not to be a danger to the public should be allowed to continue practising because a panel is not certain that he or she is such a danger’. The standard of proof is set out in the 2004 rules and as such, can be amended without the need for a change in primary legislation. Consideration of this issue was included in the last two RCVS
Strategic Plans, and is being considered separately by RCVS Council, but is included here for completeness.\textsuperscript{9}

**Recommendation 4.8: Futureproofing of the disciplinary process**

52. The RCVS’ disciplinary process derives directly from the VSA, which is a piece of primary legislation. As a general principle, primary legislation is not easy to amend and, even where there is appetite for amendment from Defra (which is not guaranteed), doing so usually requires a lengthy, drawn out process. In recent years, the RCVS has twice amended the VSA by Legislative Reform Order (LRO), however the scope of amendment that can be achieved by LRO is limited and so it is unlikely to be the correct instrument for achieving the degree of disciplinary reform recommended in this report.

53. A new Act of Parliament is likely to be required to achieve the disciplinary reforms proposed above (and in this report in general). The LWP therefore recommends that disciplinary reform is implemented predominantly through secondary legislation, with primary legislation serving only to enable that secondary legislation. An example of how this could work is the Health and Care Act 1999 (HCA) which, at section 60, enables the named healthcare regulators to modify their regulatory processes in any way ‘that is expedient for the purpose of securing or improving the regulation of the profession or the services which the profession provides or to which it contributes’ through an Order in Council\textsuperscript{10}.

54. However, even an Order in Council in not necessarily a straightforward process and may still take a significant amount of time (for example, it took the GDC just over two years to obtain an order in relation to case examiners). As such, the LWP recommends that if other legislative mechanisms exist that would allow more flexibility and enable the RCVS to amend legislative provisions more quickly as time moves on and attitudes change then these should be considered. These could include a mechanism similar to those in the new Social Workers Regulations 2018, allowing reform subject to rules concerning consultation requirements and approval by the Secretary of State.

\textsuperscript{9} Any paper presented to RCVS Council regarding changing the standard of proof to the civil standard would be subject to consultation, and would be likely to also include proposals for a range of new options for concluding cases might be implemented under the current framework, along with a package of measures to expand the range of sanctions.

\textsuperscript{10} A secondary piece of legislation approved by the Queen on the advice of the Privy Council
Part 5: Modernising RCVS registration

Recommendation 5.1: Introduce provisions to allow limited licensure in principle, including for those with a disability

55. In the context of the veterinary profession, ‘limited licensure’ refers to the concept whereby a suitably-qualified individual would be licensed to undertake less than the full range of activities that could be considered to be acts of veterinary surgery, or work that would otherwise require someone to be registered as a veterinary surgeon. In principle such limitations could range from being restricted from undertaking a specified act or area of practice, through to only being licensed to undertake a specific procedure or area of employment.

56. There is no provision for UK-qualified veterinary surgeons to operate under limited licensure. The general license for veterinary surgery is considered an international standard (particularly for the purposes of certification, for instance in international trade of animal and animal products) therefore at the present time there is limited appetite for a general introduction of limited licensure for domestic graduates, but this may change in future. Further, in future there may be an appetite for RCVS Council, after due consultation, to introduce limited licensure for overseas veterinary graduates whose degree does not qualify them for a general UK licence. This could allow the RCVS to help to address workforce shortages without undermining the assurance of standards.

57. The LWP considered whether limited licensure should be permitted for UK graduates where disability prevents them from being able to undertake all aspects of a veterinary degree and veterinary practice. For instance, an individual may not be able work in practice due to a disability, yet still be able to teach, undertake research, work in pathology, veterinary regulation, politics or policy. Limited licensure could permit such candidates to complete the relevant education for a branch of veterinary surgery, and allow them to become Members of the College. The RCVS Diversity and Inclusion Working Group will be exploring detailed proposals in due course, but it would require amendments to legislation to implement any such reforms.

Recommendation 5.2: Empower the RCVS to introduce revalidation

58. The First Rate Regulator report noted that “Most regulators already have a role in ensuring that, once registered, registrants remain up-to-date with evolving practices and continue to develop as professionals”.11 In 2007, a Department of Health report12 proposed that all the statutorily-regulated health professions should have arrangements in place for ‘revalidation’, to ensure that health professionals remain up to date and demonstrate that they continue to meet the requirements of their professional regulator as they are now, rather than when they first

---

11 First Rate Regulator report 2013, P25
12 Trust, Assurance and Safety – The Regulation of Health Professionals in the 21st Century (Communications Department of Health 2007a)
registered. The professional standard against which each is judged is the contemporary standard required to be on the Register, and not the standard at the point at which the individual may have first registered.’

59. The GMC became the first UK health regulator to implement a system of revalidation; the five-year revalidation cycle takes into account a local evaluation of a doctor’s practice through annual appraisal. The appraisal is carried out by an experienced independent doctor, and then referred to a ‘responsible officer’ who has a statutory responsibility for making a revalidation recommendation to the GMC. The responsible officer makes a recommendation about the doctor’s fitness to practise to the GMC based on the outcome of the doctor’s annual appraisals over the course of the five years, a portfolio of supporting information that meets the GMC requirements, and whether there are any outstanding concerns for any part of the doctor’s scope of work. Following the responsible officer’s recommendation, the GMC decides whether to renew the doctor’s licence to practise. Revalidation aims to give assurance that individual doctors are not just qualified, but safe. It also aims to help identify concerns about a doctor’s practice at an earlier stage and to raise the quality of care for patients by making sure all licensed doctors engage in continuing professional development and reflective practice.

60. Under the VSA, providing that conditions of registration are satisfied, a person may continue to be registered for the whole of their life (providing they pay their fees and are not removed by DC or for lack of response); there is no requirement to revalidate as there is with other professions. The LWP recommends that the RCVS be empowered to introduce a system of revalidation in future, should RCVS Council decide to do so.

Recommendation 5.3: Underpin Mandatory continuing professional development (CPD)

61. The First Rate Regulator report noted that “CPD is a requirement for all professionals wishing to register with the health professional and legal services regulators.” However, the VSA does not give the RCVS the power to enforce this requirement, except through the disciplinary process. MsRCVS are asked to certify that they have satisfied the CPD requirement as part of the annual renewal process. However, if they do not there is no power to refuse renewal of registration. The LWP recommends that the RCVS should be empowered to refuse renewal of registration if a veterinary surgeon fails to meet their minimum CPD requirement.

Conclusions

62. This historic report is the end result of the most comprehensive review of the Veterinary Surgeons Act since its inception in 1966. It sets out a coherent set of principle-based reforms which, if enacted, would allow the RCVS to function as a modern, flexible regulator fit for the 21st century. Many of the key reforms require primary legislation, and it is difficult to avoid the conclusion that

13 First Rate Regulator report 2013, P30
the time for piecemeal change is over, and a new Veterinary Surgeons Act is now required, one that is itself sufficiently futureproof to one day beat the current VSA’s half-century on the statute book.
### Part 1: Embracing the vet-led team

<table>
<thead>
<tr>
<th>Recommendation for legislative reform</th>
<th>Reasons for reform</th>
<th>Possible legislative vehicle</th>
</tr>
</thead>
</table>
| Recommendation 1.1: Statutory regulation of the vet-led team | Ensure that all paraprofessionals are working legally  
Assure the standards of conduct and education of all members of the vet-led team. | Requires primary legislation  
A less elegant and flexible solution could be achievable via reform of Schedule 3 (see RCVS RMPR Report January 2019). |

Legislation should underpin the work of those paraprofessionals who are carrying out acts of veterinary surgery.

Empower the RCVS to bring additional paraprofessions under its regulatory umbrella without additional legislation; this should be a requirement for those carrying out acts of veterinary surgery.

May include measures to allow ‘grandfathering’ to ensure that no-one is denied the right to a livelihood, much as existing practitioners were grandfathered by the early Veterinary Surgeons Acts.

<table>
<thead>
<tr>
<th>Recommendation 1.2: Flexible delegation powers</th>
<th></th>
<th></th>
</tr>
</thead>
</table>

By default, acts of veterinary surgery should be reserved to veterinary surgeons.

The RCVS should be able to determine which tasks should be eligible for delegation by a veterinary surgeon where such delegation can be fully justified and evidenced.

Potential to free up veterinary surgeons to do work that only they can do, with lower-risk tasks being undertaken by paraprofessionals under veterinary direction.

Future-proofs delegation regulation.

Requires primary legislation.
### Recommendation 1.3: Separating employment and delegation

Recommend that direction by a veterinary surgeon to a paraprofessional (including veterinary nurses) should no longer require the paraprofessional to be employed by the veterinary surgeon.

This would enable, for instance, a ‘VN practitioner’ role to develop.

**This is already a reality for many paraprofessions.**

Would empower veterinary nurses and potentially increase their reach, benefitting animal health and welfare as well as clients.

**Requires legislative change – possibly secondary legislation.**

### Recommendation 1.4: Statutory protection for professional titles

Protection of paraprofessional titles including ‘veterinary nurse’ and any new paraprofessions who fall under the RCVS’s regulatory umbrella.

Ensures that unregulated individuals are not carrying out acts of veterinary surgery.

Better clarity for the public.

**Primary legislation.**

(Draft Bill to protect the title ‘veterinary nurse’ drawn up by the College in 2015).

### Part 2: Enhancing the VN role

#### Recommendation 2.1: Extending the VN role in anaesthesia

Allow veterinary nurses to “assist in all aspects of anaesthesia under supervision”, pursuant to an animal-specific protocol.

Increasing utilisation of veterinary nurses while freeing up veterinary surgeons’ time.

**Would require amendment of Schedule 3 via a Statutory Instrument. Legal advice received states this should be possible in principle.**
<table>
<thead>
<tr>
<th></th>
<th>Recommendation 2.2: Allowing VNs to undertake cat castrations</th>
<th>Increasing utilisation of veterinary nurses while freeing up veterinary surgeons' time.</th>
<th>Would require amendment of Schedule 3 via a Statutory Instrument. Legal advice received states this should be possible in principle.</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.</td>
<td>Recommendation 3.1: Mandatory practice regulation</td>
<td>Ensure that all practices meet at least the basic minimum legal requirements.</td>
<td>Requires primary legislation.</td>
</tr>
</tbody>
</table>

Part 3: Assuring practice regulation

6. Recommendation 2.2: Allowing VNs to undertake cat castrations
Veterinary nurses should be able to undertake this task under veterinary direction and supervision.

7. Recommendation 3.1: Mandatory practice regulation
The RCVS be given the power to implement mandatory practice regulation, should RCVS Council decide to replace or underpin the PSS with a more comprehensive scheme.

8. Recommendation 3.2: Powers of entry for the RCVS
RCVS be given powers of entry in order to remedy this omission in the veterinary sector, and to ensure that mandatory regulation of practices (see Recommendation 3A) can be underpinned and enforced.
### 9. Recommendation 3.3: Power to issue improvement notices

<p>| | | |</p>
<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>
|  | Introduce a power to issue improvement notices when a person or a business is failing to fulfil a legal duty and improvement is required to ensure future compliance. | **Better protection of the public.**  
**More proportionate response than pursuing a disciplinary case.**  
**Provides practice with a clear action plan.** |
|  |  | **Requires primary legislation.** |

### Part 4: Introduce a modern ‘Fitness to Practise’ regime

#### 10. Recommendation 4.1: Introducing the concept of ‘current impairment’

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>10.</strong></td>
<td><strong>Recommendation 4.1: Introducing the concept of ‘current impairment’</strong></td>
<td></td>
</tr>
</tbody>
</table>
|  | Change the trigger for considering sanction to whether the practitioner's fitness to practise is ‘currently impaired’. | **More consistent with the primary purpose of regulation**  
Using current impairment as the gateway to sanction means that the test becomes forward-looking and more inline with the primary purpose of regulation (i.e. protecting the public). By way of contrast, disgraceful conduct is a backward-looking concept that may skew the emphasis away from public protection/current risk of hard to punish for past wrong doing. |
|  |  | **Requires primary legislation.** |

#### 11. Recommendation 4.2: Widening the grounds for investigation

<p>| | | |</p>
<table>

<tr>
<td>26. Recommendation 4.18: Power to appeal unduly lenient decisions</td>
<td>Right of appeal if RCVS believes the DC has made a decision that is too lenient.</td>
<td>Provides an addition safeguard to animals, the public and wider public interest. The PSA hold this power. There is no equivalent of the PSA for veterinary practice and so we are the only body that would be in a position to</td>
<td>Requires primary legislation.</td>
</tr>
</tbody>
</table>
27. **Part 5: Modernising RCVS registration**

28. **Recommendation 5.1: Introduce powers to create limited licensure provisions, including for those with a disability**

   Limited licensure should be permitted for UK graduates where disability prevents them from being able to undertake all aspects of a veterinary degree and veterinary practice. Other provisions could be used for overseas graduates.

   Increasing access to the profession.
   Ensuring compliance with human rights legislation.
   Ability to address workforce shortages with greater assurance of standards.
   Requires primary legislation.

29. **Recommendation 5.2: Empower the RCVS to introduce revalidation**

   Empower the RCVS to introduce a system of revalidation in future, should RCVS Council decide to do so.

   Ensure that veterinary surgeons and nurses remain up to date and continue to demonstrate that they continue to meet the requirements of their professional regulator as they are now, rather than when they first registered.
   Requires primary legislation.

30. **Recommendation 5.3: Underpin Mandatory Continued Professional Development (CPD)**

   Empower the RCVS to refuse registration if a veterinary surgeon fails to meet their minimum CPD requirement.

   Ensure that veterinary surgeons and nurses cannot practice if they are not keeping their knowledge and skills up to date.
   Requires primary legislation.

31. **Part 5A: Further registration issues**

   NB: These are mainly technical issues requiring relatively minor legislative change to the existing VSA. The LWP recommends that these be remedied via legislative change.
The spirit of these recommendations would need to be reflected in any new Act.

| 32. | **Recommendation 5.4: UK graduates**  
The VSA stipulates that any person who passes 'examinations in veterinary surgery' from a UK university with a recognition order in place 'shall be entitled to be registered in the register [of Veterinary Surgeons] and shall on being so registered become a member of the College'.  
This leaves no discretion for the Registrar to refuse registration in any circumstances (e.g. if the individual has a previous conviction or if there is any other issue that might call into question his or her fitness to practise), as so long as person passes their exams (they do not even have to graduate) they are entitled to be registered. | Cannot be remedied without legislative change. |

| 33. | **Recommendation 5.5: EU nationals**  
If a person is a 'European Union rights entitled person' and they are an 'eligible veterinary surgeon' according to Schedule, they are entitled to be registered and become a MRCVS. The Registrar does have some discretion in that they may refuse registration where the applicant has been convicted of a criminal offence, if an 'alert' has been received under Article 56a of Directive 2005/36/EC¹ or there are 'serious and concrete doubts' regarding English language ability. | Problem introduced by SI 2008/1824, therefore possibly remediable with a further SI.  
May not be relevant post-Brexit. |

---

¹ This is where one member state issues an alert concerning a particular individual that can be viewed by all other member states, the alert will usually be to notify others that the individual has been found not fit to practise by the relevant competent authority.
However, this discretion is limited and does not, for example, enable them to refuse Registration if the applicant is subject to a conditional discharge. This limitation has caused problems in the past (e.g. RCVS v Lown).

No reference to restoration following further proceedings, suspensions running their course, etc.

<table>
<thead>
<tr>
<th>Recommendation 5.6: Non-EU qualifications: Lack of formal route in the Act for registration by individuals with ‘acquired rights’</th>
</tr>
</thead>
</table>
| This relates to non-EU applicants with non-EU qualifications who have the right to register under the MRPQ by virtue of their ‘acquired rights’.

The lack of right to appeal negative decisions under S.6 of the VSA is inconsistent with the provisions relating to European Union Rights Entitled Persons (EUREPs) in that there is a right of appeal for those refused registration under s.5A (EUREPs with European qualifications) and s.5B (EUREPs with acquired knowledge and skill) and a right of appeal against decisions under S.5BA (decision to remove a person who ceases to be a EUREP).

Secondary legislation to amend Act.
May not be relevant post-Brexit.

<table>
<thead>
<tr>
<th>Recommendation 5.7: Recognition of qualification and registration</th>
</tr>
</thead>
</table>
| The recognition of qualification and registration is currently one process. This is problematic for the purposes of complying with the English language provisions that came Cannot be remedied without legislative change.
Where a competent authority has ‘serious and concrete doubts’ about a person’s English language ability, it is required to recognise the individual’s qualification (if it meets the requirements set out in the MRPQ) before refusing registration on language grounds. Due to the way the VSA is drafted, if the RCVS recognises a qualification, it technically means that person is automatically entitled to be registered.

The LWP recommends underpinning this separation in legislation.

### Recommendation 5.8: Separation of registration and licence to practise

Once an individual is registered by the RCVS, they are automatically allowed to practise. In other professions, registration and a licence to practise are distinct.

Separating these two stages would be essential if, for example, the RCVS wished to introduce revalidation. It would also mean that the ‘non-practising’ register was no longer necessary as individuals could be registered but not have a licence to practise.

This issue applies to all registrants regardless of their registration route (i.e. whether they were UK graduates, EU nationals, statutory examination).

The LWP recommends underpinning this separation in legislation.

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>This could replace the existing ‘period of supervised practice’ and VN temporary student enrolment status.</td>
</tr>
</tbody>
</table>
| 37. | **Recommendation 5.9: Temporary registration - nomenclature**  
The heading of S.7 is “Temporary registration” is misleading in that it suggests that the section relates to registration that is limited in duration. In fact, S.7 has a much wider application in that it allows RCVS Council to restrict registration in a number of ways, e.g. the place a person may work, the “circumstances” in which a person may practice veterinary surgery.  
Further, “Temporary registration” suggests registration under S.7 must be for a limited period of time but in fact, the section permits a person to be registered indefinitely (albeit with restrictions upon their practice).  
Internal policy currently limits temporary registration to five years.  
The LWP recommends that legislation need to underpin both temporary and limited registration. Provisions should be clearer than at present.  
See also recommendation 5.1: limited licensure. | Any changes will require changes to primary legislation. |
| 38. | **Recommendation 5.10: Restoration following voluntary removal/removal for non-contact**  
Where a person voluntarily removes themselves from the register or is removed by the registrar following six months without response that person is entitled to be restored to the register if they apply to do so (unless the original entry was incorrect or fraudulent). | Might be possible via secondary legislation. |
<table>
<thead>
<tr>
