

BRITISH VETERINARY ASSOCIATION / KENNEL CLUB HIP DYSPLASIA SCHEME

Breed Specific Statistics – 1st January 2001 to 31st December 2016

Hip scores should be considered along with other criteria as part of a responsible breeding programme, and it is recommended that breeders choose breeding stock with hip scores around and ideally below the breed median score, depending on the level of HD in the breed. HD status of parents, siblings and progeny for Kennel Club registered dogs should also be considered, and these together with a three generation Health Test Pedigree may be downloaded via the Health Test Results Finder, available on the Kennel Club's online health tool Mate Select (www.mateselect.org.uk). In addition, estimated breeding values (EBVs) are available for breeds in which a significant number of dogs have been graded, via the same link.

For further advice on the interpretation and use of hip scores see www.bva.co.uk/chs

The **breed median score** is the score of the 'average' dog in that breed (i.e. an equal number of dogs in that breed have better and worse scores).

Breed	No. scored in 15 years	15 year Range	15 year Median	5 year Median	Breed	No. scored in 15 years	15 year Range	15 year Median	5 year Median
