Policy position: tail docking of dogs

Tail docking as a practice applies to various different species. Welfare requirements should always be observed when considering any form of docking.

Docking of puppies’ tails

We are opposed to the docking of puppies’ tails. We believe that puppies suffer unnecessary pain as a result of docking, and are deprived of a vital form of canine expression. Chronic pain can arise from poorly-performed docking.

We would reiterate that surgical operations should not be undertaken unless necessary for therapeutic purposes and that docking should be banned as a procedure, other than for veterinary medical reasons, for all breeds of dog.

Current legislation in the UK

England, Wales and Northern Ireland

Tail docking is banned - except for certain working dogs or medical purposes. Tail docking can only be performed by a veterinary surgeon (at their discretion) and they must certify that they have seen evidence that the dog is likely to work in specified areas and is of a specified working type. The dog must be no older than five days when docked and needs to be microchipped before it is three months old (or eight weeks in Northern Ireland).

It is illegal to show a dog with a docked tail (docked after April 2007 in England and Wales, or 1 January 2013 in Northern Ireland) in any shows where the public pay to enter, except where they are demonstrating their working ability.
Scotland

Tail docking is banned and there is no exemption for working dogs. It is also an offence to take a dog from Scotland for the purpose of docking.
